

## **LEARN QUICKBOOKS IN RAPID CITY**

### **Rapid City Accountant Firm Teaches Area Businesses How to Ensure Client Confidence**

RELEASED 04.02.08

The certified public accountants at Casey Peterson & Associates in Rapid City understand the ability to perform data analysis is vital to any business, large or small. Analyzing financial data using accounting software like QuickBooks is a vital component, as it ensures early identification of critical data errors, adds value to the business, and also improves the overall confidence in business information.

On April 2, this Rapid City accountant firm will present a class concentrated on the subject of Analyzing Financial Data using QuickBooks. Area businesses will learn how to create QuickReports, generate and customize reports, save report settings, and export reports to excel.

Producing regular, periodic data file analysis allows a business to gain client confidence in the company's financial reporting throughout the year, as well as assure one's clients about the accuracy of their financial reports.

According to Theresa Hook, a Quickbooks Pro Advisor at Rapid City's Casey Peterson & Associates, "Once a business learns to accurately enter accounting information and understands the proper setup and usage of the accounting software, QuickBooks can confirm the accuracy of accounting data to a business' clients."
